

## **EXECUTIVE SUMMARY**

VAIQ #: N/A  
(9 August 2012/ 4:00pm)

Federal Recovery Coordination Program: On August 3, 2012, Virtual Lifetime Electronic Records (VLER)'s Information Sharing Initiative (ISI) successfully completed the pilot data connection between the Department of Defense's (DoD) Army Warrior Care and Transition System (AWCTS) and the Department of Veterans Affairs' (VA) Veteran Tracking Application (VTA). VLER Data Access Services allow these two systems to request and receive information based on a VLER XML standard without requiring a direct interface between systems. VA and Army care coordinators now have the capability to view each other's profile information in order to provide integrated care to Wounded, Ill and Injured Service members, Veterans, and their families. This capability supports the mission of the Wounded, Ill and Injured (WII) and Warrior Care and Coordination (WC2) Task Forces, which are charged by the Secretaries with developing a plan to strengthen functional integration across DoD and VA care coordination and case management programs. The next systems to onboard to this connection are the Federal Case Management Tool (FCMT) and the Case Management Tracking and Reporting Application (CMTRA).

ACTION REQUIRED: None, information only
